- ▶ Version Control (Subversion, Git)

Design Software

- ▶ Still (Vector) - Illustrator, Invision, Sketch
- ▶ Still (Raster) - Photoshop
- ▶ Motion - Premiere, After Effects

UX Process

- ▶ Requirements Gathering
- ▶ User Stories
- ▶ Wireframes Mockups
- ▶ High Fidelity Prototyping

Communication

- ▶ Strong Written & Verbal
- ▶ Extensive Remote Work Experience

ACHIEVEMENTS

Dean's List UCF 2010 - 2013
Eagle Scout 2007

• FULL TIME EMPLOYMENT DETAILS

Northrop Grumman

9/14 - present

As a software engineer I develop and maintain a website that the US Air-force uses to schedule and manage their virtual flight simulator training efforts. On top of regular development (currently a Java back end with a React front end) I've created and maintained a consistent visual style guide that we have implemented across the site. As UX lead I hold regular design reviews with colleagues to ensure that the style and conventions we use follow design best practices and remain consistent throughout the site. I've been with NG for over 3 years now.

Educational Data Resources (EDR)

4/12 - 9/14

I started here as an intern while attending UCF. I designed mock-ups for the company's suite of data management applications. I designed experiences related to attendance, class scheduling, grades, school finances. I also worked extensively on development of the EDR brand and marketing materials. After the application was completely mocked up I moved into a front end development role.

• NOTABLE FREELANCE EXPERIENCE

Nick Clark LLC

9/17 - present

I started my own business after taking on freelance clients periodically for a number of years. My active projects right now involve designing interfaces for an application used by the state of Maryland as part of an energy savings auditing system. Another active project is a ticketing service used by venues and artists to reserve and sell blocks of tickets to VIPs, friends, family, etc. I've worked remotely on all my consulting projects and take pride in my ability to provide accurate time estimates, consistently meet deadlines, and to be flexible on availability.

Indie Box

4/14 - 8/14

I freelanced for a short time on this project. My responsibilities here started off with me designing boxes and instruction manuals for video games. I worked on 4 or 5 different games during my time here. I later redesigned their website to improve conversion rates and worked on implementing new features with Stripe in order to process online payments.

TIME-LINE

● FULL-TIME ● FREELANCE

2017

Educational Data Resources
Orlando FL
4/12 - 5/13

ABOUT ME

Hi! I'm a UX engineer based in central Florida. I take pride in crafting stellar experiences for humans.

Outside of work I do freelance UX and engineering consulting. Outside of that work, I like to stay active and spend time outdoors. I've taken a liking to aerial cinematography as another creative outlet. When I need an adrenaline rush and interstate 4 isn't enough of one already, I like to take my bike to the racetrack for a day of riding about once or twice a year. I ride a Triumph 675 and am currently in the process of restoring a 1986 BMW touring bike. I also like to attend the local dev meetups and always enjoy sharing in conversation with like-minded individuals.

I look forward to meeting you during the next step of your hiring process!
